

CUSTOMER: Chemie-Tech
PROJECT NAME: Transnet Tanks (Cape Town)
APPLICATION: Sandblasting and Painting

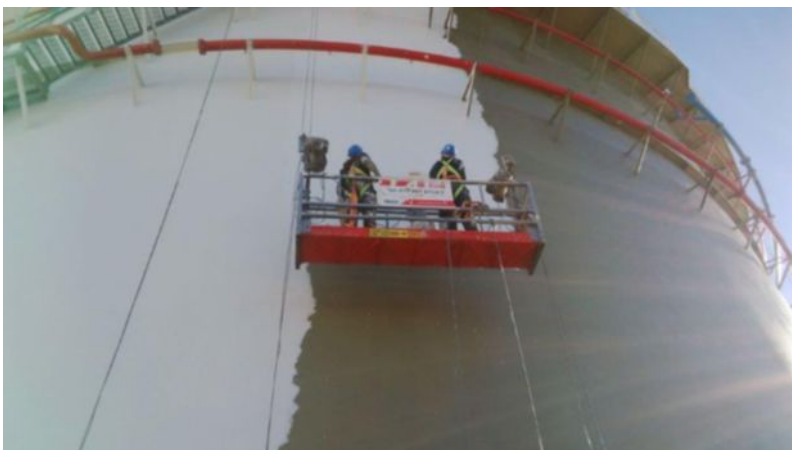

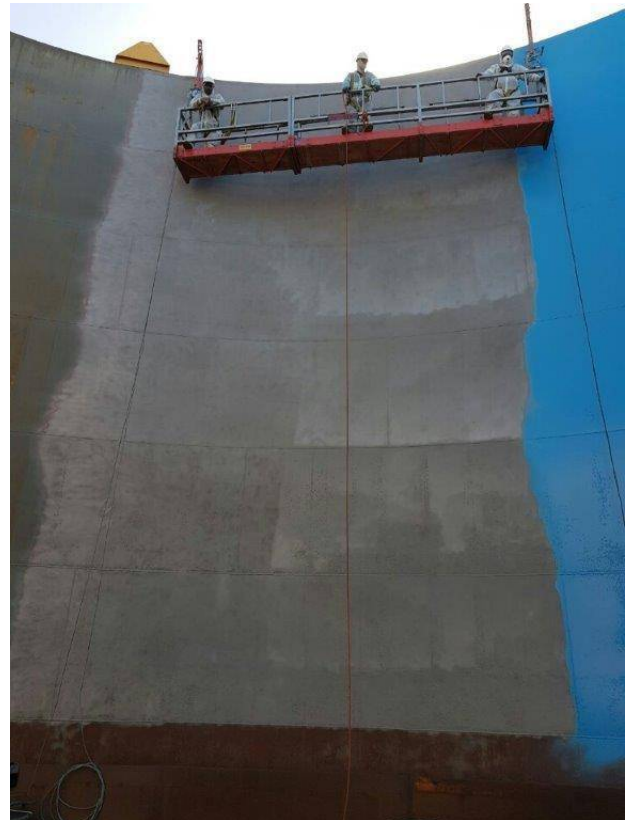

PROJECT DESCRIPTION

SkyJacks was appointed by Chemie-Tech to supply Temporary Suspended Platforms on the newly constructed Transnet Fuel Tanks in Cape Town.

2m and 3m standard platforms were suspended from parapet clamps for the internally suspended platforms before the tank roof was installed and custom designed and fabricated tank brackets that were bolted onto the tank shell alongside the handrails for the externally suspended platforms. The platforms were used to sandblast and paint the internal and external surfaces of the tanks and at peak there were 12 platforms used on the tanks.

SkyJacks installed, dismantled and moved the platforms as and when requested by the contractor over a duration of two months.

Vertical Run	20m
Type of Platform	3m and 2m Standard Platforms
Rated Load	360kg – 2 persons
Type of Hoist	2 x Compact CX500
Standards	SANS 51808, SANS 10295-2, SANS 10162-1
Type of Suspension System	Parapet Clamps and Custom Tank Brackets
